## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 8-16 allowed.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 rejected under 35 U.S.C. 103(a) as being unpatentable over Jung et al. (6,441,401) in view of Song (5,796,449) further in view of Muto (4,902,638) further in view of Endo et al. (6,016,174) further in view of Kim et al. (6,429,909).

Regarding claims 1-7, Jung et al. disclose a thin film transistor array panel for liquid crystal display and method for repairing the same where a gate line extending in a horizontal direction is formed on an insulating substrate, and a data line is formed perpendicular to the gate line defining a pixel of a matrix array. Pixel electrodes receiving image signals through the data line are formed in a pixel, and a thin film transistor having a gate electrode connected to the gate line, a source electrode connected to the data line, and a drain electrode connected to the pixel electrode is formed on the portion where the gate lines and the data lines intersect. Jung et al. fail to disclose the required repair/overlap/electrode structure, auxiliary TFT, auxiliary/overlap structure, and channel structure. However, Song discloses an active matrix liquid crystal display with one repair line above protective layer and one below where the

required repair/overlap/electrode structure is disclosed. Furthermore, Muto et al. disclose a thin film transistor, method of repairing the thin film transistor and display apparatus having the thin film transistor where the required auxiliary TFT structure is disclosed. Endo et al. disclose a method for manufacturing electro-optical element where the required auxiliary/overlap structure is disclosed. Finally, Kim et al. disclose liquid crystal displays and manufacturing methods thereof where the required channel structure is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required repair/overlap/electrode structure, auxiliary TFT, auxiliary/overlap structure, and channel structure in Jung et al. as taught by Song, Muto, Endo et al., and Kim et al. in order to have a liquid crystal display device with better performance.
